MATERIAL SAFETY DATA SHEET

Hepatitis A virus LENTICULE Discs

Material Safety Data Sheet for:

Reference materials (RM) products for Hepatitis A virus stabilised in LENTICULE disc format

Review date: 22 June 2021

Issued to: All users of CEFAS/PHE RM products for hepatitis A virus

Access: Document to be downloaded from PHE Culture Collections website at www.phe-culturecollections.org.uk

SAFETY DATA SHEET FOR CEFAS/PHE HEPATITIS A VIRUS LENTICULE DISC PRODUCTS (REFERENCE MATERIALS)

1. Identification of the product and the establishment

Product: Reference material for use in laboratories examining food and water samples for hepatitis A virus

Establishment: Culture Collections
Public Health England
Porton Down
Salisbury
SP4 0JG, UK

Telephone (9.00 – 17.00 hours) +44 (0) 1980 612512

Telephone (Out of working hours) +44 (0) 1980 612100

2. Composition/information on ingredients

Plastic vials containing control-dried hepatitis A virus pMH175 43c (vaccine strain) of Hazard Group 2, in tablet format (LENTICULE disc) with a silica gel desiccant. The silica gel self-indicating (orange) inserts are not classified as dangerous material.

Hazard Group 2 as defined by the Advisory Committee on Dangerous Pathogens 2013 Approved List of Biological Agents <http://www.hse.gov.uk/pubns/misc208.pdf>
A Hazard Group 2 organism may cause human disease and may be a hazard to laboratory workers, but is unlikely to spread to the community.

Synonyms: Infectious hepatitis, epidemic hepatitis, epidemic jaundice, type A viral hepatitis, HAV.

Identity: Positive single-stranded RNA, no envelope, 27-30 nm diameter, *Picornaviridae*, Hepatovirus.

Pathogenicity: Hepatitis A virus strain pHM175 43c (HM-175) vaccine strain HM 175 strain contains mutations involved in culture adaptation which enable it to grow well in culture and which attenuate its human pathogenicity.

Note. *Many hepatitis A infections are non-symptomatic. However, hepatitis A may cause abrupt onset fever, nausea and abdominal pain; jaundice may ensue within one to two days. Generally, in healthy individuals illness is mild with full recovery within one to two weeks. On occasion, infection may result in a severe disabling illness lasting more than six months with extended convalescence. Very rare case fatality reported, generally in older patients. No reports of chronic infection.*

Epidemiology: Worldwide spread, sporadic and epidemic.

Host range: Humans, chimpanzees, macaque monkeys, owl monkeys.

Infectious dose: Unknown.

Mode of transmission: Faecal-oral route, ingestion of contaminated foodstuffs (e.g. bivalve shellfish), ingestion of contaminated water.

3. Hazards identification

3.

Physico-chemical hazard: Not applicable

Health hazard: Minimal risk of infection provided good laboratory practice is observed

Environmental hazard: Not applicable

4. First aid measures

4.

If accidental contact with material occurs laboratory staff must follow local first aid procedures that are normally applied following exposure to an equivalent routine sample to be tested for hepatitis A virus.

5. Fire fighting measures

5.

Not applicable

6. Accidental release measures

6.

Pick up the dropped tablet (LENTICULE disc) with absorbent material moistened with a suitable disinfectant. Wipe area with a similarly moistened pad of absorbent material and subsequently sterilise all paper and the tablet (LENTICULE disc).

7. Handling and storage

7.

Store at $-20 \pm 5^{\circ}\text{C}$. Samples must be processed in a laboratory environment which, as defined by national regulations or guidelines, is suitable for the handling of micro-organisms of ACDP Hazard Group 2. Staff handling the material should have been trained in the handling of infectious biological material. The material should be treated with the same degree of care as would be exercised with equivalent samples submitted to the laboratory for testing. Hand-to-mouth contact should be avoided while working with the materials and normal hand-washing procedures relating to the handling of routine samples to be examined for hepatitis A virus must be observed also with the reference materials.

8. Exposure controls/Personal protection

8.

Use good laboratory practice and wear appropriate laboratory coat.

9. Physical and chemical properties

9.

Inert odourless dry material.

10. Stability and reactivity

10.

Long term storage will not increase the risks of infection associated with handling the material.

11. Toxicological information

11.

Not applicable
